Since we started assessment we have not seen any suspended slag material either by swipes or our Radeco air samplers. However, the activities so far have been core soil sampling and surface vegetation removal. Once we start excavation that may change. We will perform those activities with dust suppression and the same air monitoring protocol.

Regards,

Eric

Yes, our department would handle any EMS/Rescue issues, but a private ambulance company provides transport. Is it mostly just gamma? Any threat of airborne alpha once removal starts? Wasn't sure if its dust laden material you would be removing or just larger slag.

Thanks, Jeff

Great Jeff. Thanks for the response. Just so you know, our job here is mostly excavation of radiological material. No additional potential fire hazards. Does your department handle EMS or is that a separate company?

Regards,

Eric

Hello Eric,

That would be fine. It should be easier since you have my email already, I can then forward it to the appropriate party.

Thanks, Jeff

Subject: Pollution Report # (Initial)4 Niagara Falls Boulevard Radiological Site - Initial Removal Action PolRep for Niagara Falls Boulevard Site

Good Afternoon Jeffrey:

Attached is the initial Pollution Report for the removal action at Niagara Falls Boulevard Site. The first week of June, I reached out via phone message to Chief Colangelo regarding the mobilization of our crew and the start of the removal action. I left a voice mail for him again today but also spoke to someone via the main number who gave me your email address for the report. Please let me know if you want to be the contact to receive these reports or someone else in your department.

Thanks

Regards,

Eric M. Daly
